

Game Rules

Aztec's Claw Wild Dice is a classic 5-reel video slot with Wild symbols, special game features and Bonus game.

The game is played with 20 paylines at different bet values.

Wins are paid out when matching symbols appear on paylines in succession from the leftmost reel to right.

Winning combinations pay out according to the game payable. Values displayed in the payable are dynamic and display the pays for the currently selected bet.

Simultaneous wins on different paylines are added together for the total winning amount.

Features

Wild Multiplier

At every spin, all WILDS have a random multiplier of 2x, 3x, 5x, 6x, 8x or 10x. The WILD multiplier applies to the total win of each payline that it is part of. If there is more than 1 WILD symbol part of the win of a payline, the multipliers of all WILD symbols on that payline are added to each other.

Bonus Claw Game

3, 4 or 5 Scatters in total on the main board triggers 7, 9, 12 Free Claw Grabs accordingly with possible Jackpots and win multipliers.

3, 4, 5 scatters triggers a Bonus Game with 7, 9, or 12 free Claw grabs.

The Bonus Game is a Claw mini-game where the claw pulls colorful Cubes from a pool to win rewards.

Each Claw attempt may or may not grab a Cube, which is defined by a chance. Each Cube has a Value and a color that can trigger special rewards. Cube Value is defined randomly from a range between 1x to 20x. Possible Cube colors are Red, Blue or Yellow.

Every time when a claw grabs the Cube of any color, it pays a reward (Cube Win) that is calculated as the Cube Value multiplied by bet.

In addition to Cube Win, Side Quest rewards extra prizes based on Cube's color.

Red Cubes can trigger a Jackpot value: Mini (x50), Minor (x100), Major (x1000) or Grand (x5000). To win the Jackpot, players must win a Side Quest based on the red Cube's value. The Side Quest is successful if Cube's Value is greater or equal to the shown threshold value.

Blue Cubes can award additional claw attempts (+2, +3, +5), that can be triggered via successful Side Quest. The Side Quest is successful if Cube's Value is greater or equal to the shown threshold value.

Yellow Cubes offer an extra multiplier (2x, 5x, 10x), that is applied to the Cube Win. Extra multiplier can be won during Side Quest. The Side Quest is successful if Cube's Value is greater or equal to the shown threshold value.

In case of success in the Side Quest, total awarded win is a sum of the Cube Win and Side Quest win.

In case of unsuccessful Side Quest, awarded win contains Cube Win only.

How to calculate paylines wins

- To calculate a single payline win, count the number of identical symbols lined up in a sequence on the line starting from left to right;
- If three or more identical symbols are lined up, find the win value in the Pay Table. You can find the value for 3 symbols in a row, 4 in a row and 5 in a row — for all symbols. Only the highest winning combination per line is paid out;
- The above doesn't include any Scatter symbols;
- If the winning combination starts with three Wilds, there can be many ways to interpret the win. In this scenario, only the highest winning combination is paid out;
- To calculate win in Bonus Game, calculate a Cube Win as your initial bet multiplied by a Cube Value. If the Side Quest is successful, then apply Side Quest multiplier or add Jackpot win to the Cube win.
- Simultaneous and coinciding wins are added and paid;

- Malfunction voids all pays and plays.
